INVENTO · STOCK MANAGEMENT

Voice-first Stock Management

Fast, voice-first inventory entry for small and mid-sized warehouses in Myanmar without scanners or POS setups.

Scan — Speak — Review — Save

Made with GAMMA

THE PRODUCT FLOW

Scan it. Say it. Save it.

A friction-free mobile workflow designed for fast warehouse stocking.

1. Scan

Point the camera. Scan a barcode or QR code; it becomes the product's unique ID so nothing duplicates.

2. Say

Hold and speak. Say the product name and count one item at a time. No typing required in loud rooms.

3. Review & Save

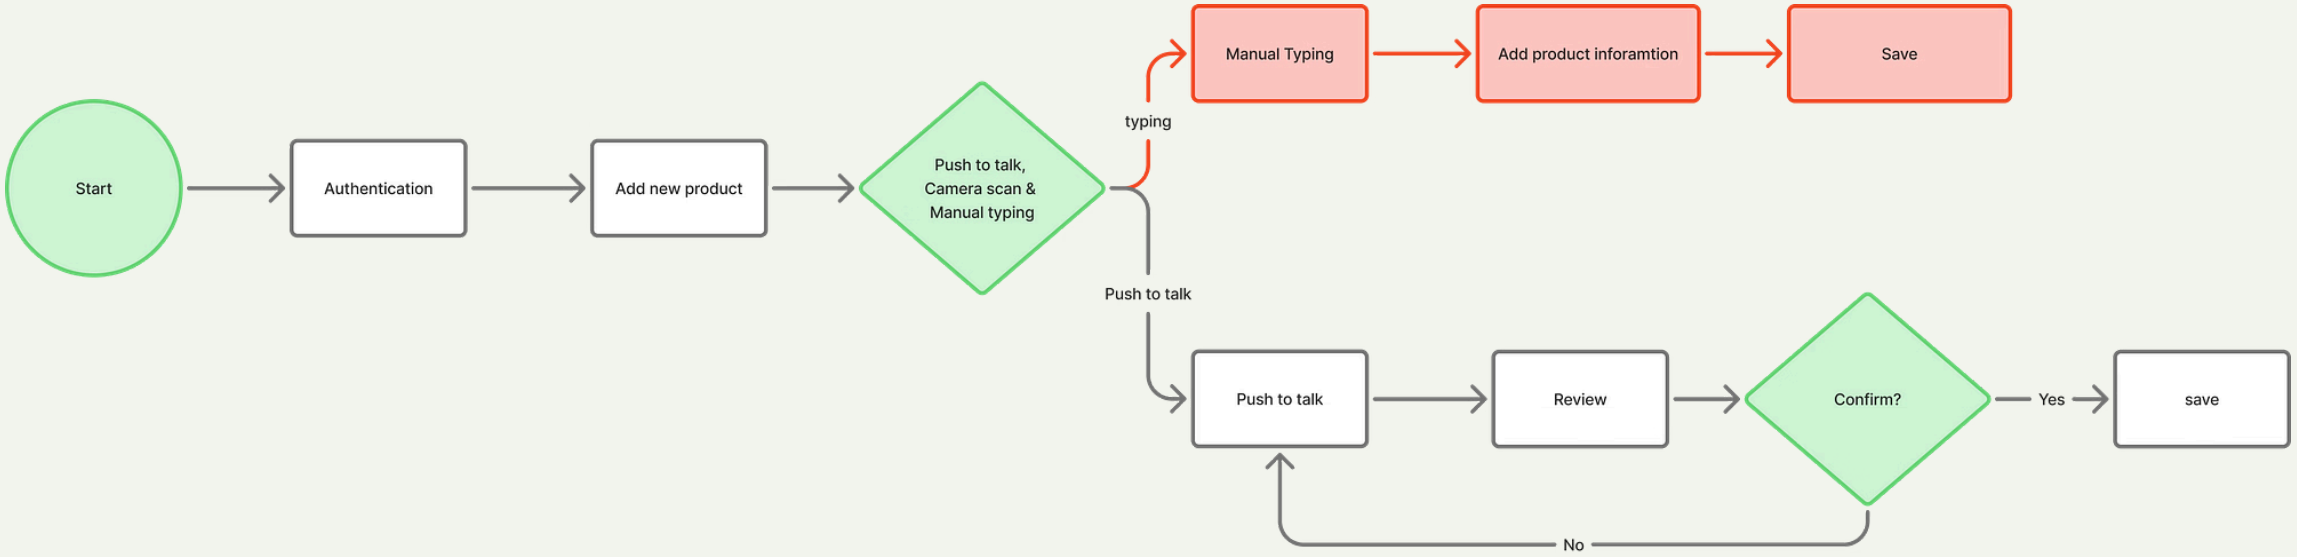

Check, then save. Inspect the transcript, fix anything with one tap, and batch-save the stock in.

Prefer typing? Manual entry works just as well for new products or unlabelled inventory.

Made with GAMMA

ADDING STOCK

Adding stock is simple — by voice, scan, or typing.

Made with GAMMA

VOICE-FIRST ARCHITECTURE

Push to talk: add stock by speakconnectioning

Built for noisy, fast-moving floor environments with zero catalog setup.

Hold and speak

“Instant noodle, 40 pack.”

Product name and quantity captured cleanly in one short spoken sentence.

Built for noisy floors

One item at a time

Single-item speech prevents background acoustic noise and regional accent mix-ups.

Always reviewed

Check, retry, confirm

Verify the live transcript instantly. Retry with one tap before confirming stock in.

Your products

No preloaded catalogue

Register local and imported inventory on the fly by barcode scan, voice, or manual keypad.

Unique scan IDs prevent duplication across repeated voice intakes.

Made with GAMMA

REORDER INTELLIGENCE

Quick supplier connection

Turn inbound stock logging into instant procurement continuity.

1. Save & Link

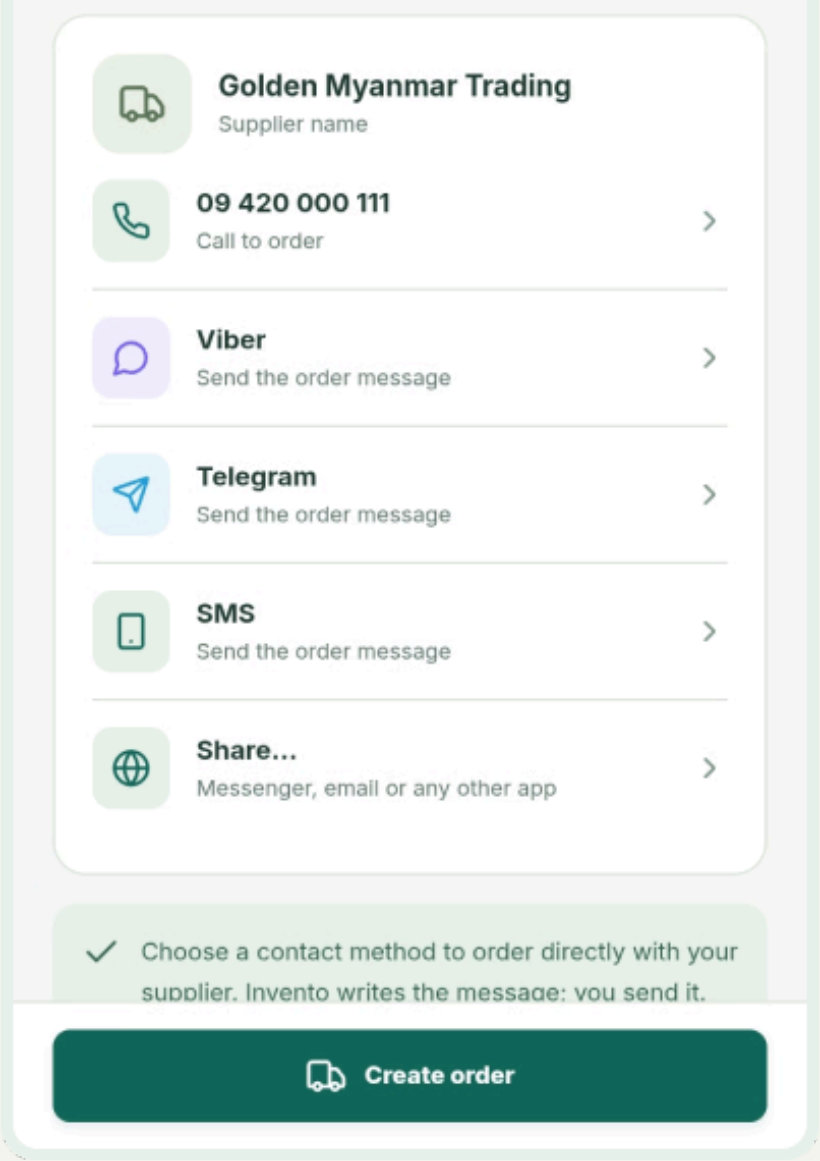

Link supplier to product. Save supplier contact details once during stock-in; each SKU connects directly to its source vendor.

2. Receive Alerts

Low or out of stock. Invento monitors threshold balances and alerts the warehouse manager before shelves run completely empty.

3. Reorder & Track

Contact and track. Reach suppliers directly from the app interface, log the purchase, and monitor incoming delivery status.

Eliminates lost contact books, paper slips, and digging through scattered chat messages.

COMMERCIAL MODEL

Start with FREEMIUM

Remove adoption friction today, unlock multi-user operational scale tomorrow.

Phase 1 · Freemium MVP

One user, one app

Push-to-talk voice entry, stock-in and run tracking, low-stock threshold alerts, and linked supplier contacts on a single mobile device.

Free Tier: synchronizationRapid pilot onboarding with zero upfront hardware costs.

Growth Tier · Expansion

Your whole team

Multiple synchronized mobile users, collaborative team sharing, real-time multi-warehouse overview, and dedicated web dashboard for the owner.

Premium Tier: Multi-device synchronisation and administrative controls.

Test market pull and prove daily warehouse retention first, then monetize team collaboration.

ROADMAP & PILOT ASK

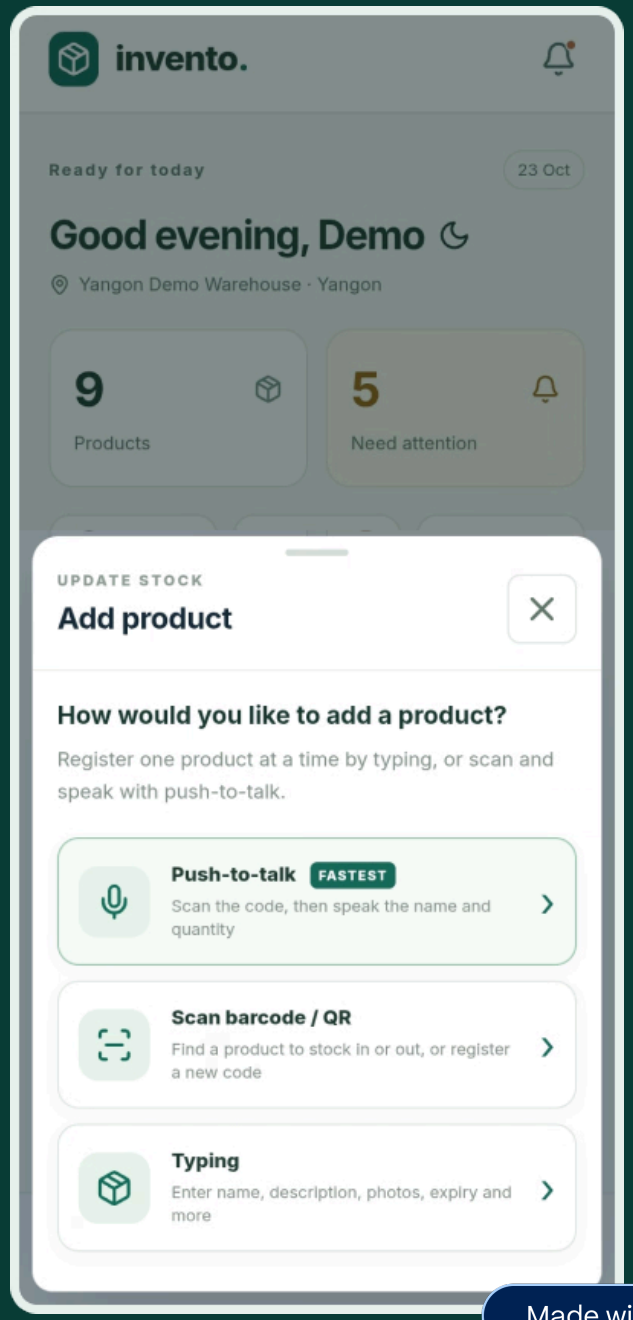

From one voice to your entire business

A phased product trajectory starting with our warehouse owner pilot.

Phase 1 · Now — Push-to-talk MVP: Single warehouse, mobile voice stock-in, and freemium single-user access.

Phase 2 — Multi-user scale: Web app for owners, multi-warehouse sync, and team floor scanning.

Phase 3 — Business suite: Invoicing, digital payment rails, and POS integration in a hybrid model.
